

Feature: Client Management System

=====

CLIENT REGISTRATION

=====

Scenario: Register a new client successfully

Given the user is on the client registration page

When the user enters name, email, address, password and confirm password

And clicks on the Register button

Then the client should be created successfully

And the client details should be stored in the database

Scenario: Password mismatch during registration

Given the user is on the client registration page

When the user enters different password and confirm password

Then the system should show error "Passwords do not match"

=====

MEETING MANAGEMENT

=====

Scenario: Schedule a meeting successfully

Given the user is on the meeting page

When the user enters meeting topic, number of people and start date/time

And selects a valid client

Then the meeting should be scheduled successfully

And the meeting should be stored in the database

Scenario: Missing meeting details

Given the user is on the meeting page

When the user leaves required fields empty

Then the system should show error "All fields are required"
